```java
package com.bean;

public class Product {
        private int id;
        private String name;
        private String category;
        private float price;
        public int getId() {
                return id;
        }
        public void setId(int id) {
                this.id = id;
        }
        public String getName() {
                return name;
        }
        public void setName(String name) {
                this.name = name;
        }
        public String getCategory() {
                return category;
        }
        public void setCategory(String category) {
                this.category = category;
        }
        public float getPrice() {
                return price;
        }
        public void setPrice(float price) {
                this.price = price;
        }
        public String toString() {
                return "Product [pid=" + id + ", pname=" + name + " ,category=" + category +",
price=" + price + "]";
        }
}
```
